## Our Services

“ We repair where others replace ”

- We are an engineering based organisation providing advanced electronic analysis, debug and repair for over 25 years
- We have specialised tools, expertise and processes that allows us to go to component level on an unlimited range of electronic equipment
- We apply our technologies across a broad range of industries including: Medical, Manufacturing and Service Industries
- We are most cost effective as we repair rather than replace yielding a massive advantage over product replacement

Cost Savings  
of up to:

For equipment that is not under warranty or deemed obsolete by the manufacturer we can offer:

- 1** **70% Savings on typical existing solution:** We have specialised tools, equipment and expertise in house that allow us to go to deep component level to analyse, reverse engineer and properly repair virtually any piece of electronic equipment. We repair electronic equipment at Component Level rather than replacing the complete part which is usually a fraction of the cost (<30%) of the alternative solution provided by the OEM.
- 2** **Dramatically Reduced Downtime:** We work in hours and days rather than weeks and months! We aim to evaluate all product within 8 hours of receipt and, if given the instruction to proceed, carry out the repair in less than 2-3 days. The status of the repair is always available in real time!
- 3** **Extensive In House Expertise & Capabilities:** We have been in business for 25 years repairing in excess of 5,000 items (per annum). We have, over this time, developed our technology to provide successful & cost effective outcomes in the highest percentage of cases.
- 4** **Quality:** All repairs are Backed by a Rock Solid Warranty. We offer a refurbishment and upgrade service in addition to normal break/fix repair on most high value pieces of equipment providing a Full 12 Months Product Warranty.
